KODAK KAF-4320 IMAGE SENSOR

2084 (H) X 2085 (V) FULL FRAME CCD IMAGE SENSOR

DESCRIPTION

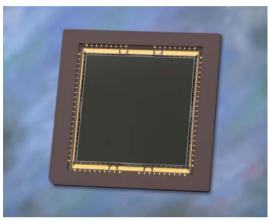

The KODAK KAF-4320 Image Sensor is a high performance monochrome area CCD (charge-coupled device) image sensor with 2084H x 2085V photoactive pixels. It is designed for a wide range of image sensing applications in the 350 nm to 1000 nm wavelength band. A dynamic range of >32,000:1 is possible with read out time less than 0.5 seconds.

The sensor is built with a true two-phase CCD technology employing a transparent gate. This technology simplifies the support circuits that drive the sensor, reduces the dark current without compromising charge capacity, and significantly increases to optical response compared to traditional front illuminated full frame sensors.

Twenty-four micron pixels are arranged into an array of 2084x2085 photosites. One quarter of the image is read from each of four outputs. Each output is driven by a low impedance two stage source follower that provides a high conversion gain, allowing low noise at pixel rates of 3MHz per output (net readout rate of 12MHz).
